

# X-Trieve™ HC Hydrostatic-Set Retrievable Production Packers

**IDEAL FOR HIGH-PRESSURE, HIGH-RATE GAS PRODUCTION**

## OVERVIEW

X-Trieve™ HC hydrostatic-set retrievable packers are for large bore, deviated well applications or where conventional packer plug setting techniques are not possible. These reliable single-trip packers help save both time and costs, and reduce intervention risk.

## FEATURES

- » Holds pressure above and below
- » Barrel slips for effective load distribution
- » Advanced rupture disk technology (available in 500-psi increments with temperature compensation curves)
- » Dual rupture disks for reliability
- » Built-in anti-preset features (hydrostatic module is biased in the closed position)
- » Uses available hydrostatic pressure to initiate the setting process
- » Independent contingency setting mechanism
- » Removed from the wellbore using cut-to-release technology

## BENEFITS

- » Reduces packer setting costs
- » Reduces rig time
- » Eliminates wellbore intervention to set the packer setting plug
- » Reliable cut-to-release design eliminates lengthy milling operations during retrieval operations

## APPLICATIONS

- » Highly deviated wells or where conventional packer plug setting techniques are not possible (non-perforated wells)
- » Where a large-bore retrievable packer design is required

## OPERATION

- » Run on tubing string
- » Set using available hydrostatic wellbore pressure and applied surface pressure without plugging devices
- » Removed by cutting mandrel in predetermined cut zone using chemical or mechanical cutting tools
