

# LIGHTING LAYOUT SOLUTIONS

## HOW MANY FIXTURES DO YOU NEED FOR A RETROFIT OR NEW CONSTRUCTION OPPORTUNITY?

Lighting layouts allow you to adjust to the desired or required foot-candles, reflectance tolerances, special sizing, and additional specifications needed for the application. Save time and money with our simple, easy-to-use **Lighting Layout Tool**.

Lighting Layouts provide numeric and visual rendered layouts for interior or exterior lighting applications, including but not limited to parking garages, stadiums, offices, and manufacturing spaces.

These layouts can reveal characteristics, effects, and affects of lighting that can be showcased prior to design and install – saving time and money by ensuring the specifications meet the needs of the customer.

**Seeing is believing.** Being able to showcase the changes in luminance for different materials, reflection tolerances, and surface properties can predict the effect of fixture designs with realistic measures.

This technical tool allows for the development of accurate photometric solutions, showing placement and direction of the light source within the specifications of the actual space.

It's a fast and effective tool for simple room calculations using IES data for quick and easy access, and is searchable by product type, life, lumens, tolerances, CCT, CRI, and any certifications for energy programs.

All these features and benefits enable the user to create energy and lighting layouts for simple solutions to support the customer.

**EIKO DEFINES EASY.**

solutions. service. simplicity.
