

Your data. Unlocked and working for you.

Your live origination data, ready for analytics, reports, and your next AI initiative, right where your team already works.

Your data holds real potential for growth. Lakehouse Sharing puts it to work: a live, governed view of your loan and account origination data, refreshed every six hours, delivered straight into the Fabric or Snowflake environment you run. Combined with your other data sources, you'll have a complete picture of your credit union in near real time. No exports, no copies to reconcile, no pipelines to build or maintain. With less than an hour to get up and running, your data can start working for you immediately. Whatever you want to do with your data, Lakehouse Sharing gets you there.

Build your own models

Train credit, fraud, pricing, and propensity on your own performance history, not someone else's assumptions.

See your portfolio and pipeline live

Assess funded volume, delinquency, channel mix, dealer performance, and forecasting in one current picture instead of a monthly snapshot.

Blend everything into one view

Combine core, CRM, credit bureau, origination, marketing data, so your teams leverage the same data, regardless of workflow or use case.

Stay audit-ready without the scramble

HMDA, fair lending, adverse action, and internal reviews, built on data that's already validated and traceable.

Activate your fintech ecosystem

Connect to fintechs, tools, and integrations with live data access. No custom integration projects required.

Spot the next opportunity earlier

Act on segmentation, cross-sell, recapture, and campaign performance while it's still timely, not a quarter later.
