

DUMI ManipulatOR™

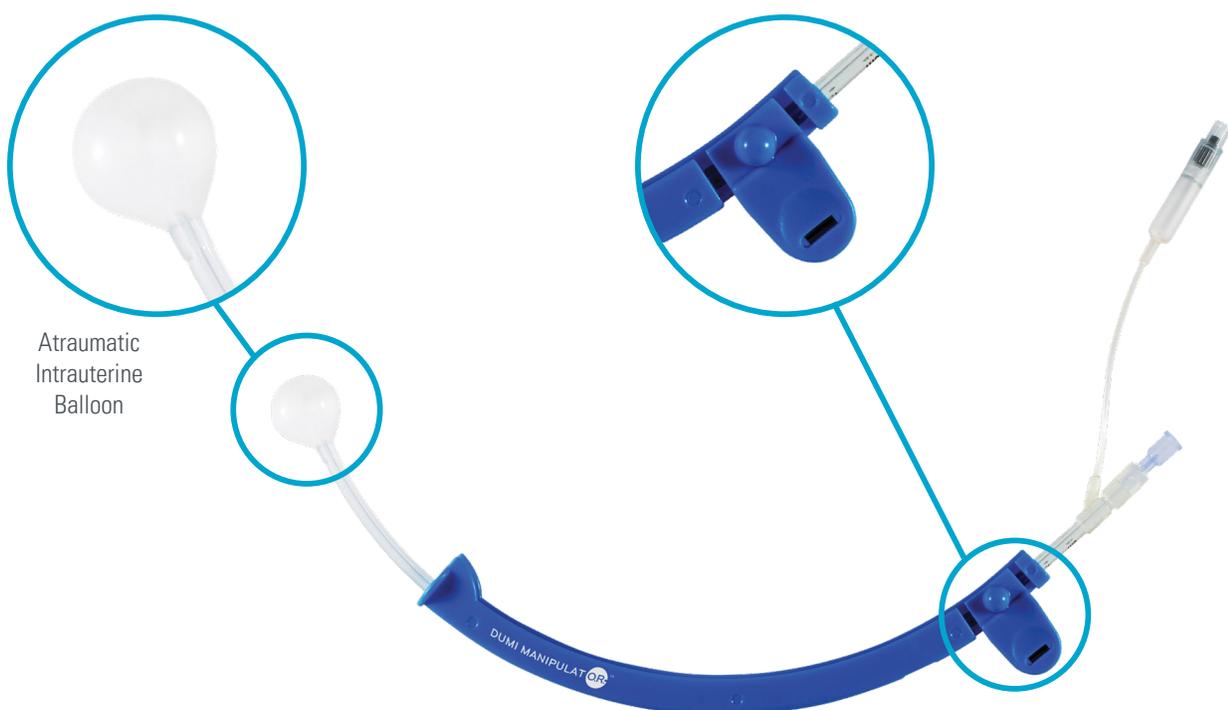

The new standard in diagnostic uterine manipulation.

Versatile and safe uterine manipulation injector.

The DUMI ManipulatOR™ is a versatile and safe uterine manipulator and injector that reduces the need to change instruments, minimizing the risk of trauma and saving time. The DUMI ManipulatOR features an atraumatic intrauterine balloon that helps prevent uterine perforation, a pinch-grip handle for easy repositioning, and an anatomically curved shaft for easy insertion and maneuverability.

The DUMI ManipulatOR facilitates intraoperative manipulation of the uterus and simple hysterosalpingography for tubal patency studies. Surgeons commonly use the DUMI ManipulatOR in diagnostic laparoscopy, minilaparotomy, and fertility exams.

SAFE UTERINE MANIPULATION

- Apple-shaped balloon stabilizes the DUMI ManipulatOR™, providing a leak-free seal that secures the uterine position and reduces the risk of accidental removal
- Adjustable handle's measurement markings indicate precise uterine depth settings to fit the patient's anatomy
- Ergonomic design allows for the manipulation of anteverted and retroverted uteri
- Atraumatic distal tip minimizes the risk of uterine perforation

VERSATILE AND COST-EFFECTIVE

- One-piece design combines the functionality of a uterine manipulator and uterine injector
- Disposable, single-use device eliminates the need for cleaning and sterilization

REF / Order #	Description	UOM
DUMI-350A	DUMI ManipulatOR™ – 350mm diagnostic uterine manipulator injector	Box of 12, sterile
