Introducing Symmetry Surgical's Instrument Inventory Solutions

“Efficient inventory operations lead to effective surgical operations.”
Symmetry Surgical® knows you have competing priorities, including ensuring patient and staff safety, considering the costs of surgical instruments and ensuring clinicians have the right tools at the right time.

These priorities require your focus, time and attention. While you dedicate your efforts to these challenges, there is an issue that may be quietly reducing operational efficiency and increasing costs in your facility.

Symmetry Surgical’s suite of Instrument Inventory Solutions will improve instrument inventory data quality and provide powerful analyses to efficiently identify and prioritize set and vendor standardization opportunities in days – a process that may typically take months or years when performed manually.

With our proprietary software and databases, Symmetry Surgical provides the clean and detailed information you need to make smart surgical set and vendor-related decisions that impact your facility’s costs, efficiency and quality of care.

Each solution has been designed to play a specific role in transforming instrument inventory data into actionable information. These include:

- **Count Sheet Commander™** cleans and systematically organizes instrument inventory data so count sheets can be made accurate and complete.

- **Set IQ™** identifies and prioritizes set standardization opportunities. It performs more than 1 billion complex analyses in 24 hours.

- **Vendor IQ™** is a proprietary software and database that analyzes instrument inventory data to identify vendor standardization opportunities.

Quickly and easily tackle inventory data at your facility by contacting your Symmetry Surgical Sales Specialist at 800.251.3000 (US) | +41 (0) 52 557 590 or sales@symmetrysurgical.com

**Your partner in surgical instrumentation.**
Consider the instrument data and count sheets in your facility. How many line items have missing, incorrect or incomplete information? If your facility is at risk for inventory data integrity issues, Symmetry Surgical’s Count Sheet Commander™ will clean and systematically organize instrument inventory data so count sheets can be made accurate and complete.

THE POWER OF PRISTINE DATA
With clean data, the surgical team can identify available instruments, improving case pull accuracy and avoid unintended duplication.

Knowing exactly what is in inventory and on the count sheets also helps improve efficiency, minimize errors, reduce risk of surgical delays and reduce instrument costs.

HOW IT WORKS
Count Sheet Commander identifies and corrects data integrity issues such as missing, incomplete or inaccurate vendors, part numbers, descriptions, product attributes that impact preference cards and count sheets.

It then organizes instrument data into a standardized language and sequence, while updating instrument inventory data with accurate, complete and systematically organized information.

Count Sheet Commander may be completed as a single project or used on an ongoing basis through a subscription service.

GETTING STARTED
1. Obtain current active instrument inventory data in an Excel file.
2. If your facility is using a tracking system, obtain a template of the required format to upload the cleansed and normalized data uploaded back into the system.
3. Contact your Symmetry Surgical Sales Specialist at 800.251.3000 (US) | +41 (0) 52 557 590 or sales@symmetrysurgical.com to discuss how Count Sheet Commander can quickly empower your team with accurate data that makes a difference.
To standardize sets effectively, surgical teams must know exactly what they have in inventory. The process of manually comparing sets to understand the difference in instrument type and count could take months or even years.

Yet this process is imperative for standardization purposes. And if set standardization needs are postponed or ignored, they may result in unintended set duplication, unnecessary reprocessing costs, OR delays and increased inventory costs.

**THE SET STANDARDIZATION SOLUTION**

Set IQ™ is Symmetry Surgical’s set standardization solution. This decision support tool quickly conducts complex analyses for identifying and prioritizing set standardization opportunities.

With clean data, Set IQ can perform more than 1 billion analyses of the entire set inventory and accurately identify and prioritize set standardization opportunities within 24 hours.

With standardized sets, facilities can improve efficiency, costs, and the quality of patient care.

**HOW IT WORKS**

Using cleansed and normalized data, Set IQ analyzes each set in a customer’s inventory and compares the instrument type and count of each instrument type against all sets in the customer’s inventory.

**GETTING STARTED**

1. Obtain clean and normalized instrument and set inventory data in your facility.
2. Contact your Symmetry Surgical Sales Specialist at 800.251.3000 (US) | +41 (0) 52 557 590 or sales@symmetrysurgical.com to discuss how Set IQ can simplify set standardization in your facility.
Today, more than ever, it is especially important for facilities to reduce their operating costs. While vendor standardization strategies may be effective, poor data makes it difficult to identify opportunities to rationalize vendors.

This leads to the inability to aggregate spending, non-compliant contracts, inefficiencies in the supply chain and erroneous off-contract spending that result in higher costs and inefficiencies.

**EFFICIENCIES UNCOVERED**

As your partner in surgical instruments and solutions, Symmetry Surgical can help your facility standardize vendors with Vendor IQ™. This proprietary software and database identify vendor standardization opportunities, that can lead to cost savings and greater supply chain efficiencies.

**HOW IT WORKS**

Vendor IQ™ efficiently cross references vendor codes across portfolios and surgical specialties resulting in a report, by vendor, showing all the codes that can be converted to Symmetry Surgical’s broad portfolio of surgical instruments and devices.

**GETTING STARTED**

1. Obtain current active instrument inventory data in your facility.
2. Contact your Symmetry Surgical Sales Specialist at 800.251.3000 (US) | +41 (0) 52 557 590 or sales@symmetrysurgical.com to discuss how Vendor IQ can uncover cost-efficiencies for your facility.
