## MamaBirthing

### Improve perinatal outcomes for vaginal and operative births with C-section Module

MamaBirthing with C-section Module is a cost-effective solution designed to help learners gain competency and confidence in vaginal and operative births. The addition of the C-section Module extends the capabilities of the previous iteration of MamaBirthing without losing any of the features.

MamaBirthing with C-section Module is operable as a tabletop task trainer, wearable with a standardized patient, or used with a manikin. The quick and easy setup facilitates operation with minimal training to improve learner engagement and effectiveness.

MamaBirthing is an anatomically accurate model which allows for realistic simulation and demonstration of vaginal and operative birth scenarios.

	Simulation scenarios	MamaBirthing	
Stage 1 & 2	Abdominal and vaginal examination	✓	
	Anatomical visualization of rotation at birth	✓	
	Fetal heart rate sounds	✓

BUY ONE,  
**Gift One**

For every MamaNatalie and MamaBirthing bought through Laerdal Medical in high-income countries, another one is donated to help save lives at birth in a low-income country.

Thanks to the contributions to Buy One, Gift One, more than 4000 simulators have been donated to help train thousands of health workers in the Helping Mothers Survive program in 40 countries. With your contributions, we can help ensure mothers and newborns receive quality care where it's needed the most.
