SimCapture

Moving from On-Premise to Cloud

Making the switch from your existing SimCapture on-premise infrastructure to the cloud offers many benefits, including reduced complexity, flexible scalability, and improved security. But most importantly, it will help you better support your learners and your simulation program.

SimCapture allows you to effectively manage, record, and assess simulation training on-site, in-situ and remotely using a single web-based interface hosted in the cloud. Valuable data is collated into reports and statistics on performance and trends to track usage and learning outcomes.

Make the Switch to the Cloud

Transitioning to cloud technology will allow your organization to take advantage of many benefits, including:

Reliable and Secure Platform

SimCapture Cloud resides on Amazon Web Service (AWS), which is used by GE Healthcare, Adobe, and Slack, just to name a few. The global AWS infrastructure allows us to provide:

✔ Remote learning capabilities

✔ Continuous enhancements to SimCapture with no downtime

✔ Easier implementation and support by Laerdal services team

✔ Better integration with LLEAP, SimPad and 3rd party suppliers

Flexible Student-Focused Learning

Whether you're 100% based in a simulation center or need remote learning capabilities, SimCapture has the ability to help you better support your learners' needs with access from anywhere.

✔ New use models: take advantage of options like Remote OSCE functionality, peer-to-peer practice, self-recording assignments, telemedicine training, and the SimCapture mobile recording app, which allows participation from anywhere.

✔ Flexible solution: SimCapture enables your organization to train onsite, offsite, or in a hybrid environment, helping your organization adapt to changing needs.

Enhanced Collaboration

Because of the multi-tenant database architecture, more functionality is available for collaboration and networking between organizations.

✔ Take advantage of new functionality to improve collaboration such as curriculum sharing.

✔ Reduce workload and improve consistency - share your courses and curriculum across multiple campuses for increased efficiency and standardization.

Easier Implementation and Rapid Support

Moving to the cloud can help remove tedious day-to-day tasks from your team, allowing them to focus on more impactful work.

✔ No onsite data storage equipment means you do not need to replace expensive servers or take care of maintenance, making your costs more predictable.

✔ Responsive support based on your feedback means bi-weekly releases, bug fixes, and improvements that can be rapidly deployed without any operational disruption.

✔ Proactive support: cloud connectivity means that issues can be identified and often resolved before they are even reported.

Improved Program Management

As your center expands, your data capacity needs can be addressed simply and rapidly.

✔ Simplify your pathway to accreditation with straightforward, automated reports showing learner contact hours, utilization, and more.

✔ Efficient center management: save time and resources with easy-to-use scheduling functionality, automation of evaluations, and the ability to leverage peer reviews instead of relying on administrators manually managing data.

✔ Show ROI to leadership: data at your fingertips to help you make the case for new equipment, additional staff, and other resources.
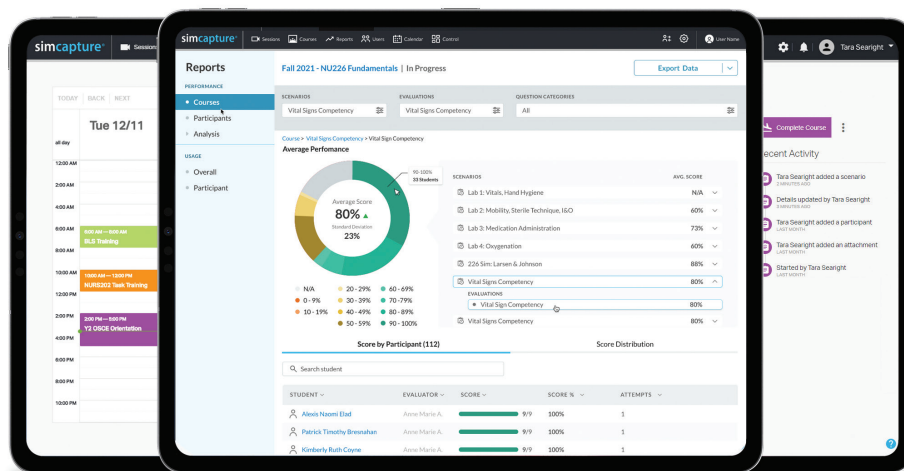

Helping You Succeed

We are focused on making your transition to SimCapture Cloud a seamless experience. In addition to your local Sales representatives, a dedicated team will help you along the way:

A **Project Manager** will guide you through the process of getting the cloud version of SimCapture implemented in your center. From turnkey AV installation to SimCapture integration, your Project Manager will work closely with our **AV Specialists** who are skilled in IT, security, audiovisual, and networking to ensure all equipment is implemented and you are ready for success.

Our expert **Educational Services Team** provides customized training to help you make the transition and take advantage of new functionality and workflows from day one.

Educational courses can be conducted virtually or onsite depending on your needs.

A dedicated **Impact Manager** will support you in achieving long-term success with SimCapture. They will help you increase utilization and improve consistency as well as leverage data to impact program outcomes.

Our **Customer Service and Technical Support** teams are located in New York and Washington D.C. Our friendly and knowledgeable team is always just a call or email away. Support is available Monday through Friday from 8:00 am - 8:00 pm (Eastern) via phone at 877-LAERDAL (523-7325) or email at simcapturesupport@laerdal.com.

Visit Laerdal.com/SCCloudConversion to learn more or contact your local representative for a demonstration.
