

Deliver High-Quality Financial Services Faster With Gliffy

Here's what you can do with Gliffy to manage any workflow and keep your team on track.

Visualize Complex Structures & Processes

Your customers' complex challenges require equally complex solutions. Visualize every system and workflow with Gliffy's ability to make business process models, network diagrams, entity-relationship diagrams, cloud architecture diagrams, and more.

Cross-Functional Collaboration

Visuals make it easy to communicate technical ideas to stakeholders of all backgrounds and expertise levels so you can focus on building and delivering high-quality financial services faster. Gliffy's unique layer linking feature gives you the ability to create diagrams with interactive layers that can toggle on and off in the diagram viewer so every stakeholder gets the right amount of context.

From Our Users

"One of the easiest tools I've found for making maps, flowcharts, and general diagrams. It allows us to seamlessly collaborate so anyone on our team can add, edit, and manipulate a diagram."
– Laura B., Financial Advisor

"Gliffy is cloud-based, which allows me to use it across my multiple platforms. There are plenty of templates to choose from. I primarily use the network and process flowchart. It's very intuitive and the learning curve is low."
– Kurt L., Financial Planning Specialist

Work Where Your Team Works

Stop switching tools and using connectors, and start saving time by diagramming directly in Confluence. With Gliffy, it's easy to add links to other Confluence pages, Jira issues, or external resources within your diagrams, and even upload CSV files directly to Gliffy to drag and drop data points into your diagram.
