

Align Your Institution With Gliffy

Here's how Gliffy helps you manage information across your entire institution, no matter the size.

No Training Required

Thanks to an intuitive drag-and-drop interface and plenty of in-product guides and tool tips, there's no training required to jump into Gliffy for the first time, so your team can share knowledge through diagramming right away regardless of experience level.

Visualize Large Amounts of Data

The more information you're working with, the better Gliffy can help you manage and communicate it all. Data linking makes it easy to drag and drop information from a CSV file right into your diagram, and layer linking makes even the most complex diagrams dynamic and effective.

Work Where Your Team Works

Stop switching tools and using connectors, and start saving time by diagramming directly in Confluence. With Gliffy, it's easy to add links to other Confluence pages, Jira issues, or external resources within your diagrams. All diagram text is fully searchable in Confluence, and copies of your diagrams throughout your Confluence space are always automatically updated, so your team never has to reference outdated information.

From Our Users

"It's very intuitive to use, click and drag to get components into place, connectors that stay connected as you adjust your workflow. I don't have to construct my own swim lanes!"
– Adriene R., Yale
