

Meet Gliffy, the Intuitive Choice for Native Confluence Diagramming

Save time, build alignment, and visualize everything with Gliffy Diagrams for Confluence.

Visualize Complex Processes and Structures

Quickly capture and clarify ideas and build stronger documentation by making **flowcharts, network diagrams, UML diagrams, cloud architecture diagrams, entity-relationship diagrams, business process models, and more.**

Generate Diagrams From Code

Save hours by creating UML diagrams, entity-relationship diagrams, and more without dragging and dropping a single shape. Simply write or generate Mermaid code to represent your diagram, then copy and paste it into Gliffy's built-in Mermaid editor.

Create with AI

Generate fully editable diagrams in seconds—no need to drag and drop individual shapes or spend time searching for a template. Just write a plain-text prompt describing the diagram you want to create and let Gliffy do the heavy lifting!

Diagram Securely

We're committed to keeping your information safe and secure so your team can diagram with confidence. Gliffy is **SOC 2 Type II** certified, AI diagramming within Gliffy is **ISO certified**, and we offer a diagramming solution that meets even the strictest compliance needs.

Straight From Our Users

If you have the need to create workflows and show in-line process steps in your Confluence documentation, you can boost your productivity with Gliffy. It's tools like this that are at the very heart of process improvement."

– Adriene, Business & Process Analyst

As a Software Developer or Architecture or Business Analyst, you probably use Confluence for Documentation... You need an app for System Design, Flow chart, DFD Diagram, Process, User flow diagrams. Gliffy is the best among the others; it provides good UI and the speed of the application is fast."

– Ramesh, Senior Consultant
